The public institution for the management of geomorphological monuments of nature „CAVING PARK GRABOVAČA“

THE CAVING PARK

GRABOVAČA

www.pp-grabovaca.hr

The Caving park Grabovača is only 2,5 kilometres from the centre of Perušić. There are 6 caves and one pothole in the area and three of the caves are protected on the national level as geomorphological monuments of nature. During spring, summer and autumn the visitors are taken on a tour of the cave Samograd (the only one momentarily lit up) by the guides from the Caving park Grabovača. The other caves can be visited individually – without a guide. The region of the district of Perušić is a paradise for the caving tourism. Besides the caves that are situated in the Caving park Grabovača, there are also a dozen or so other caves, still not completely explored.

COME AND SEE FOR YOURSELF THE BEAUTY OF THE KARST UNDERGROUND TO WHOSE ORNAMENTS NOBODY STAYS INDIFFERENT!

SAMOGRAD – probably the most described cave in Croatia, with its magnificent arched ceilings, bridges and balconies leaves one breathless. The entrance to Samograd reminds of the entrance to a cathedral and many dripstone decorations remind of a statue of the Holy Virgin, therefore, it is no wonder that you feel calm and safe there. The cave is 240 metres long and the stairs chiseled in stone run throughout its length. According to the stories of the local people, there is a lake at the end of the cave, but at the moment it is unapproachable.

MEDINA PEĆINA (The bear's cave) – although the visitors can enter this cave, only 64 metres long, there are in its extension five majestic chambers so far discovered and only the bravest have entered there – and they were not disappointed. The beauty that these chambers emit can hardly be dreamed of in the most

wonderful dream.

AMIDŽINA PEĆINA (cave) – situated in the vicinity of the bear's cave and with its crystal white ornaments it reminds of an ice-pit. This is another jewel from the Caving park Grabovača, for centuries trying to tell us its story and save itself from oblivion.

TABAKUŠA, GREAT KOZARICA and LITTLE KOZARICA and pothole SLIPICA also tell their story to all those who set out in good faith on the marked pathways of the park to each and every cave. The area of the Caving park Grabovača is ideal for education in nature, for old and young, wanting to relax from the flurry of the city, for adventurers, cyclists, ordinary tourists, trekkers and hikers from the age of 7 to 77.
